Educational Software Write-Up

Title: Total Recall

Version: 5.0

Publisher: Zyense

Target Audience: 4+

Curriculum: This software could be used for History, Reading, or Science. For example, a student could choose to use this software to create a web about ecosystems.

Possible Environment: This could be used in many different environments. The teacher alone could use this as a tool for lesson preparation. Students could use this as individuals for assignments or even as a study tool. Small groups could be assigned a topic to cover in their map.

Cost: Free

Describe the Software: This software is a basic mind mapping application. The user can create a custom mind map or web to share with others. The software allows the user to create maps from scratch or from a template that has already been created.

Impression of Software: We were not too impressed with the capabilities of this software. We found other software that create mind maps as well and offer more features. For example, with other software there was the option of attaching images or other files into the map. Total Recall would be a very basic software to use just to get the job done.

Does the app pass? No
