

App Evaluation

Title	Explain Everything Collaborate
Version (if there is one or if it is one of a series)	5.2.2
Publisher	Explain Everything sp. z o. o.
Target Audience (if your opinion differ from the publisher, state that) Type(s) of software with your justification (can be more than one and when justifying, you have to convince me not just re-iterate my words)	Does not specify, but we would say upper elementary at least.
Curriculum(s) - How does it (or can it) fit into the curriculum	It could fit into any curriculum and subject for students to make collaborative documents; notes, story boards, venn diagrams, video making, and voice chat.
Possible environment(s) and Why:	Home or Classroom because students can work on this at school for assignments and if they have access to the internet, they also can also work on any project from home.
Cost: If there is a free version and a paid version, I want to know both: Are their costs for different licenses available and if so, what are they? In-app purchases	There is a free 14-day trial, but you can purchase the full version for \$108 a year or on a monthly plan for \$12.99 per month. No in app purchase, if you pay for the software, you can access any of it's features.
Write a paragraph or two describing the software: Assume I know nothing about the software. There needs to be enough description so that I can visualize this software	<p>This software is similar to google docs, it has some of the same features. Students could collaborate or work as an individual. You can create documents for notes, storyboards, venn diagrams, videos, outlines, and share weblinks.</p> <p>There is a tool bar where you can draw, type, change colors of the background or text.</p>
Write a paragraph or two on your impressions of the software and possibly how you see the software being used in your class: Include good	We did not have a very good impression of this software. Although it has great tools and can be used for many different lessons in a classroom,

<p>and bad aspects of the program and/or things that were well done. For example, navigation was easy, screen design was good, sound effects were used effectively, and feedback was effective and immediate... o If you disagree on anything (from publisher or any review you see....) tell me</p>	<p>it costs and for a teacher who could be paying out of pocket for it, that's just not feasible. We could use this software in the classroom for students reading books in collaborative groups, they can create storyboards together. It would also be useful for students to collaborate on making videos of news reports or plays for their stories. Also, this app is useful for giving lectures and minilessons.</p>
<p>Does the software pass?</p>	<p>Yes! This software does pass because it could be very useful in the classroom if the teacher or school decided that it would be worth paying for!</p>
