

App Evaluation

| | |
|---|---|
| Title | Teacher Tools Grader |
| Version (if there is one or if it is one of a series) | 3.4.2 |
| Publisher | Alfredo Delgado |
| Target Audience (if your opinion differ from the publisher, state that) Type(s) of software with your justification (can be more than one and when justifying, you have to convince me not just re-iterate my words) | It says it is for ages 4 and up, probably because it was so simple to use, however we feel that it would be for adults or possibly high school teacher aides, because this is a grader. |
| Curriculum(s) - How does it (or can it) fit into the curriculum | Does not fit into curriculum per say, but it does help in grading any assignment. |
| Possible environment(s) and Why: | Home or School, depends on if the teacher is grading at home or at school. |
| Cost: If there is a free version and a paid version, I want to know both: Are their costs for different licenses available and if so, what are they? In-app purchases | It is completely free, no in app purchase. |
| Write a paragraph or two describing the software: Assume I know nothing about the software. There needs to be enough description so that I can visualize this software | Teacher Tools Grader contains a stop watch, a running record, and a grader. The stop-watch you can use to time readers or timed tests. The running record allows you to enter information gathered while listening to a student read and it gives you their words per minute, accuracy percentage, error and self-corrected rates. |
| Write a paragraph or two on your impressions of the software and possibly how you see the software being used in your class: Include good and bad aspects of the program and/or things that were well done. For example, navigation was easy, screen design was good, sound effects were used effectively, and feedback was effective and immediate... o If you disagree on anything (from publisher or any review you see....) tell me | We loved this software, because it is very simple and easy to use, with no required set up. The good thing about the program is it saves teacher time because it does calculations for you. The only bad thing that we found is that you can only keep a running record of one student's reading statistics at a time. A teacher could use this in the classroom when monitoring a student's reading progress and when grading assignments. |
