

# Types of Rocks

**K**

What I already know

Rocks are found outside.

Rocks have different shapes.

They are different sizes.

They are different colors

They lay on top of the earth.

**W**

What I want to know

How are rocks formed?

Why are they different?

Where did they come from?

How many types of rocks are there?

**L**

What I Learned

There are types of rocks- Igneous, metamorphic, and sedimentary

Igneous rocks are melted, harden, then cooled

Metamorphic rocks are formed by heat and pressure.

Sedimentary rocks are material that is settled into layers. the layers are squeezed until they harden.
