

Code Karts

Version: 3.0.1

Publisher: Edoki Academy

Target Audience: 4+ (We believe in could be used up to second or third grade)

Curriculum: This app fits into the curriculum because it teaches children how to use coding to solve a problem. **Environment:** single player, computer time.

Cost: Free (In-APP purchases: \$2.99 full access)

Description: Code Karts is an app that decodes while playing with go-karts. The go kart will only make it to the finish line if the user uses the right code to get it there. If coding is incorrect, players must start over.

Impression: We think this app provides a great tool for children to learn how to decode. Because this seems like a game, students do not realize they are coding. With the fun and inviting sounds and visuals, the app is enhanced. We would both like to implement this app into our future classrooms.

Does the software pass APPS? Yes
