

Jigsaw Puzzle

Version: 2019.9.0

Publisher: Critical Hit Software, LLC

Target Audience: ages 5+

Types of Software: Problem Solving- the user is shown the full picture, then the pieces are broken apart, and the student has to put them back together again.

Curriculum: This game is great for pattern recognition and memory. It would be used mainly as a fun game to play during free time. Possible Environment(s) and Why: Home because it does not connection to any educational curriculum.

Cost: Free , with in app purchases to buy more complicated puzzles.

Description: This is an app that gives the user several options of puzzles to choose from and then put together. The level of difficulty can easily be adjusted by increasing the number of pieces the puzzle. Once the user chooses a puzzle and number of pieces, the puzzle then scrambles itself up and the user has to put it back together again.

Impression: We liked this app, but the ads got annoying. The higher number of puzzle pieces the more the screen would begin to get cluttered and you couldn't see all the pieces at once. All of the images were bright and colorful.

Does the software pass APPS: No, you would have to alter the curriculum in order to use it.
