Synopsis:

This lesson is a very fun and student-collaboration based lesson. Students will be getting into groups of 5 and picking a science topic to make a movie about. An example of a topic is the planets. Students will be using the Toontastic 3D app to help create their storyboards for their movies. The Toontastic 3D app gives examples of storyboards and how to make them correctly. Once groups have created their storyboards using the Toontastic 3DE app, they will start to create their movies using the iMovie app. The students know how to use the iMovie app from a previous classroom app. Groups will be given 30 minutes throughout the week to work on their movies. This lesson will be towards the end of the year and will be shown to the parents. We will be spending a week on this lesson.

How students will use it:

Students will form their groups of 5 and use the classroom iPads to access the Toontastic 3D app. Once students pick their topic from the given list, they will use the Toontastic 3D app to create their storyboards. Once students have done that, they will use the iMovie app to create their movies. After creating their movies, we will watch them as a class and present to parents at the end of year party.
