Title: Kids Planet Discovery!

Version: 3.9.1

Publisher: Planet Factory Interactive S.L.

Target: The target age group for this app is 4 years old and up. This app is very interactive with games related to outer space. For children at age 4 it is very easy to navigate and auditible to their understanding. This type of software is a stimulation because students experience aspects of outer space playing games.

Curriculum: This app does fit into the curriculum because it shows different definitions and parts of outer space. It is a visual representation that allows interactions with the animated outer space.

Environment: This app could be used during play time at school or outside of school. It can also be used during the lessons of outer space.

Cost: The app itself is free, but includes in app purchases. Purchases are not necessary, but can increase available area of the software.

Description of Software: This software allows students to engage with outer space activity and better their understanding. The user will see different characteristics of planets, meteors, stars, and black holes. The games in this app are descriptive and informative.

Impression of Software: I enjoyed this app because it could be a great introduction of outer space. It is also a safe online gaming for students that does not need supervision. I believe student will learn more from this app than they expect.

Pass: This software passes the education software evaluation form because the games are informative of outer space and do not require supervision.
