

**Title:** Mimo

**Version:** 3.20 (3-4-19)

**Publisher:** Mimohell GmbH

**Target Audience:** 13+

**Curriculum(s):** coding

**Cost:** free to download, but requires you to have a membership to use anything.  
\$9.99 a month, \$29.99 a year

**Description:** Mimo is an app that is to help teach coding. This app has different categories like learning to create an app, basic coding, or how to become a hacker. Within these categories, there are steps that you must go through each step until you get to the final part of the program. Once you complete all the steps, you can win awards and certifications. We wished that we could explore this app more and not just get a generalized account of what we think is happening.

**Impression:** We think that this app is a little too hard for elementary students and would be something that advanced students can learn to use. It also is something that you have to monitor the students when using because everything has to be purchased, so we wouldn't want them to be charging our cards or something. It also would be something that took too long to do in the classroom with a minimum of thirty slides to a badge. We just weren't impressed really.
