Title: QR Code Generator & Creator

Version: 1.1 (3-2-18)

Publisher: TapMedia Ltd

Target Audience: Ages 8+

Curriculum(s): n/a

Cost: free

Description: The QR code generator & creator is a very unique app that allows anyone to create a QR code to link a document, app, YouTube video, or website to a unique QR code. You can color coordinate the QR code and personalize them, so that you do not easily confuse them. Once the QR code is created, it goes on a list in order of date created and can be named something unique, so that you can easily access the codes you have created and won't forget what each QR code is for. It is a basic with all white and looks like a piece of notebook paper.

Impressions: We actually really like this app and think it could be used in the classroom in a variety of ways. This would be great to have QR codes that students need to scan for centers or scavenger hunt to direct specifically to the website, game, or video you need them to watch. This app would be more beneficial to the teacher to keep things organized, but if students use the app, they will need supervision because they can enter in anything to link to the QR code to. This app can be used by students though in a presentation for other students to go to their presentations and view it.
