

Title: Math Word Problems for K-1

Version: 1.3 (10-6-18)

Publisher: Tapfun Inc.

Target Audience: Ages 6-8

Curriculum(s): Math

Cost: free

Description: This app is focused on letting the student problem solve and find the answer without any options available. The student is presented with a math word problem and they have to draw a picture, a ten block, an equation, and number line before giving the final answer. If the student gets it right, they move on to a more advanced math word problem.

Impressions: We liked this app a lot because it addresses all of the learning styles. Also when it comes to testing, they have to be able to show their work and this app forces them to do their work before submitting the answer. It is a good app that encourages them to work out the problem and celebrates their successes. We really liked the app and could see it being used in the classroom in a center.
