

- Title: Quizlet
- Version: 4.3 (updated 1 month ago)
- Publisher: Quizlet Inc
- Target Audience: 4+ years old, we would agree that some content is easy enough for pre-school.
- Type(s) of software with your justification: Drill and Practice and Discovery Learning
  - This would work for Drill and Practice because it provides quizzes and activities that can be used for students to study materials already covered in class. The app could be used for Discovery Learning if students choose to research and learn more quick facts about different topics/subjects.
- Curriculum(s) - This app could easily fit into the curriculum because it can be used for drill/practice to make sure that students understand information before actually testing them over it or moving on to the next topic. (maybe use like an exit slip?)
- Possible environment(s) and Why: This would most likely be categorized best for a single user environment. If students were to work in groups or answer questions as a class, this would not be as effective.
- Cost
  - Our group downloaded the free app, which provided the option to direct students to quizzes, create a class, and create a "study set". The two upgrade options were \$1/month for Quizlet Go or \$3/month for Quizlet Teacher.
  - For the free app, it can be downloaded on any device. Family sharing enables up to 6 people to use the app, but does not allow for in-app purchases to be shared.
  - Quizlet Go removes any ads, allows a change in theme, and the option to use offline. Quizlet Teacher unlocks more themes, features from the website, images to study sets, and the option to have unlimited classes.
  - The in-app purchases would be for possibly upgrading the app, mentioned above.
- Write a paragraph or two describing the software
  - This software is perfect for drill and practice to test students knowledge over different subjects and topics. The "study sets" include a section to learn more about the topic, use flashcards to study information, fill-in the blank questions, matching study games, and quizzes to test knowledge over topics and subjects. This app is easy to use, can be customizable because teachers have the option to create, edit, and share their own "study sets" with their students.

- Write a paragraph or two on your impressions of the software and possibly how you see the software being used in your class
  - The software is extremely easy to use and contains appropriate grade level content. Creating study sets is an easy, step-by-step process, and it is easy to share the content with students. Personally, our group would use this app for reviewing material in preparation for a test. By doing so, it will help us determine what areas students need to work on by participating in the other review activities provided. It will also allow the teacher to determine if their lessons are providing enough information for the students to pass the quizzes.
- Does the software pass
  - Yes, this software would be a great app to use in the classroom because it fits into the basic types, environments, and provides materials that would be beneficial for students.
