

## **Gathering Student Feedback**

**Grade** – 1st

**Subject** – Science

**Tools** – YouTube and Poll Everywhere

---

**Synopsis** – I would start my lesson going over a specific topic and finding a video on YouTube that correlates with the topic. This will give my students extra knowledge on the topic to help them understand it better. Then after the lesson is complete, I would put a poll on the screen. I would ask the students if they felt comfortable with the topic we discussed in class. If they say yes, we will move on. If they say no, we will continue the lesson going back over the information slower.
