

Lesson 6 Hologo & Google Classroom

7th Grade Geography

Tools: Hologo App, Google Classroom, iPad/Chromebook

The object of this lesson is to allow students to explore specific information on their own, following a reading from their text. Using Google Classroom, students will individually read a selected article about the Earth, its cross sections, oceanic crust, and continental crust. Then they will access a link to the Hologo app. This app provides labeled, detailed images of specific content related to what they read, which can be rotated and moved by the user to view different angles. There is a voice over that explains the image and movements. Once the student has explored the material, there is a quiz that can be accessed for assessment.
