**PowerPoint Response**

What did it make you think about that you hadn't thought about? What are some ideas that you can think of? What other tools can you use unconventionally and how?

I hadn't previously thought of using PowerPoint as a drill & practice where the slides link to one another to create a specific game or task. I think using it to create games that are interactive and engaging for students is a great option for PowerPoint. It is also another way to create formative assessments. I could see PowerPoint being used to quiz students to gauge their knowledge going into a lesson, and then reevaluate with the same quiz to see their progress later. I think any tool can be used unconventionally if you think outside the box. Google Forms for example, can be used to survey students to gain answers to a game (like the one I created). I like the idea of using Excel to categorize or organize a library. It's hard to think of ways to use tools unconventionally unless there is actually a problem that needs a solution.
