

## Response 1

Describe at least 3 ideas on how you would/could use these robots in your class.

It's difficult to imagine incorporating these robots into ELA or History curriculum. They seem to be best suited for classes geared toward computers/technology, math, or science. However, I'll do my best to think outside of the box.

- 1) I could use the Cue or Dash & Dot robots to teach students how to code and give specific instructions to guide AI. You could also integrate the bots with the Playground app.
- 2) Integrated with a Social Studies lesson, we could create a trail on a map to indicate certain historical paths like the Trail of Tears or Civil War Battles.
- 3) Within a Math lesson, the robots could be used for problem solving or to use geometric angles and degrees.
