

Response 2

What accessories can you get and create to use with the robots? What ages would you use the robots with?

1. There is a Xylophone accessory that allows the robot to play the instrument according to how the child instructs or programs it.
2. Gripper Building Kit allows students to build, much like Legos, with the bot.
3. Sketch Pack allows you to turn code into robot drawings.
4. Paint tape seems to be a much needed “accessory” for this tech tool to create a grid, maze, or game.

These robots can be used with a variety of ages, 4 and up, depending on how they are used. Personally, I can see upper elementary to lower mid-level engaging well with this technology.
