

thinkfield mind mapping

V o.6.4

Christian Huck

Target Audience: General (Anyone)

Software Type(s): This application could be used as a tool to assist students with their organizational skills.

Curriculum & Environments: This app would be of good use when planning out and brainstorming papers.

Cost: Completely Free.

About the Software:

This application features infinite maps for the user to be able to link together text, videos, images, and web pages together to organize their thoughts. thinkfield allows for the user to share their map or come back to it later to finish their thoughts. It creates a visual overview of whatever thoughts the user might have. With this app, the user has the ability to zoom in and zoom out to make the map as expansive as they would like it. The user can also create a thinkfield within a thinkfield making it easy to expand on a subtopic.

Impressions and Classroom Usage:

This application reminded me a lot of the computer program Inspiration 6 that we used in Technology class this semester. The idea is to be able to link bubbles together to organize the thoughts of the user. If this were to be used in a classroom setting, there would have to be supervision over the students because a very cool feature to this app is the ability to link websites, and the sites are not limited. Therefore they would have free reign over the wide open internet.
