

Title: Fifth Grade Learning Games

Version: 5.5

Publisher/ Creator: RosiMosi LLC/

Target Audience: 5th graders although can be used for ages 9-12

Types of software: Tutorial because the app is teaching the students new information, although after learning the new material, there are reviews. So this could also be determined as drill and practice in a sense.

Curriculum: I would use this in my curriculum because I have units that can be incorporated with this app. I would use this to teach them about pronouns, root words, and sentence types. I think this is even a great transition app to give to 4th graders over the summer to prepare for the 5th grade!

Cost: Free to download, some free games, other are available with an in-app purchase

Description: This software has so many sections available for not only 5th graders, but other ages trying to learn. Although, it does revolve around 5th grade curriculum. It varies from math, language, and science. It has games, lessons, and activities for children to learn advanced 5th grade material.

Impression: I liked how there was so much to pick from. The only thing that I did not like so much is that you did have to pay for some of the games. They do offer free ones, so there is still use for the app for free. I enjoyed knowing that this app was specifically for my grade and the curriculum in it revolved about them!

Does the software pass Review? Yes

Does the software pass Evaluation? Yes

IPad or Android? IPad

How it works: You just pick the section that you want to learn and get to work! Very simple to use. They have everything divided into subjects, so it is easy to find.
