

Title: iMovie

Version: 2.2.8

Publisher: Apple Inc.

Target Audience: The app is targeted towards ages 4 and up. We feel that this app is pretty simple to navigate, although we feel that younger ages may need a little more help.

Type of Software: iMovie is a Tools software because the user has the ability to create a movie with any material they'd like. The user gets to pick what they do the movie over. The app is also Discovery Learning because the user gets to determine what they want to learn.

Curriculum: iMovie could be used in any curriculum subject. The app could be used in a numerous amount of ways while incorporating math, science, English, reading, etc.

Cost: iMovie is a free software.

Software Description: iMovie is such a neat app for students to use. The app has eight unique themes with matching titles, transitions, and music. iMovie allows the user to create trailers and movies. You are able to customize logos, names, and so much more. There is also apple designed video filters.

Software Impression: Overall, the app is a great app for students. The app is very user friendly, and easy to navigate. iMovie is a fun way for students to learn, and create projects that keep them engaged. Although the targeted age group is 4 years and up, I think that younger elementary students may need supervision and help starting the iMovie, and may need to create a trailer to start. Children that are older elementary students should have easier knowledge when creating an actual iMovie. I think that this app is great.

Does the app pass? Yes
