

Title: BrainPOP

Version: 3.1.5

Publisher: BrainPOP

Target Audience: BrainPOP is for ages 8+, but parents say it is age 6+. I believe this app can target 6+ because you may have some students that are more advanced than others and enjoy the videos.

Curriculum: This app can be used for just about any subject. It has language and reading, math, science, social studies, arts, hobbies, and thinking and reasoning, self-direction, and health and fitness. If you are going over geometry in your math class, you can pull up this app and play some videos over geometry for the children.

Possible Environment: I would suggest the use of BrainPOP in the regular classroom by the Teacher. BrainPOP has daily films for students to learn from.

Cost: This app was free, but there were in app subscription options. Students would never need to purchase an extras in the app but the teachers may find the purchases useful.

Does the Software pass: Yes

BrainPOP provides a lot of content for a free app. Users get a new animated documentary every single day, followed by a quiz to see how much they understand. There are a wide range of topics- science, history, technology, art etc. Kids can watch a movie about the nature of dogs one day and then learn about a blog the next.

I believe this software would be great for students to use in class as a big group. The navigation was easy and the colors of the app were very appealing. One thing I love about the app is that it is free, so you do not have to pay for it and you get a lot of videos for the children to learn from.
