

Title: QR Code Reader- QR Scanner & QR Creator

Version: 1.5.1

Publisher: Farhana Kabir

Target Audience: This app is for students but, because you can use the internet to search QR codes, students may need supervision. Also, there seems to be a lot of ads. The layout is very basic and has only a few tab options so that will make it easier on the students. The app says the age limit is 9+.

Curriculum: Students could use in the classroom to scan teacher built QR codes to learn more about the lesson. Could be implemented for many different subject areas. Would give opportunity for learning new content if teacher-built lesson around the QR codes.

Possible Environment: This app is a little over our age limit, but we thought that with a parent the students could still use this app.

Cost: This app was free

Does the Software pass: Yes

QR Code Reader- QR Scanner & QR Creator Is an app that allows students to scan all kinds of QR codes, scan products barcodes, save your scans in history, share codes via SMS, Email, Twitter, and Facebook. It also displays QR codes and barcodes on screen, jump directly to web addresses decoded. Flash supported for scanning QR coded or Barcodes at low-light environments. You can share your QR codes through: Email, Social networks (Facebook, twitter, clipboard, googles plus), text messages.

This app is pretty basic and created and reads QR codes. It also reads barcodes. It also has a very basic layout with only a few tab options to make it easier for students to use. It has very few options such as search, history, creator and settings. I think the app could be a bit more interesting, it isn't the most appealing, but it is effective. I do like that the app was free and you didn't have to pay anything for it.
