Title: Total Recall- Mind Map

Version: 5.0

Publisher: Zyense

Target Audience: This app would be great for all children. Although you can share your ideas, students would primarily use the app to construct ideas, then the teacher could look at the saved file or have students share with them.

Curriculum: Could be used for many different subject matter areas. No specific focus. Allows students to express their ideas and organize their knowledge. Would be great for evaluating students.

Possible Environment: This app could be used in any environment, you could use it in your classroom or even at home**.**

Cost: The app was free to download but the free version was only limited to 3 mind maps.

Does the Software Pass: Yes, I would include a few more free mind maps though.

Total Recall- Mind Map is the simplest and most elegant mind mapping solution on the iPhone and iPad. You will instantly create beautiful mind maps and share them with colleagues and friends. This app as intuitive touch interface, unlimited size of mind maps; pane enlarges itself when adding bubbles, various lay outing of mind maps, send mind maps by e-mail to other users, universal app for iPhone, iPod touch, and iPad. The free version is limited to 3 mind maps.

I believe Total Recall- Mind Map is a great app for students to use in class or even for parents and teachers to use when they want to make maps to send to others. I think some may think that the app is not as good as similar apps because it is very basic, but I believe the app would be effective for younger students. I would like to see more than 3 free apps in the free version.
