

App Evaluation Write Up

Name of App: Earth School

Evaluators: Kennedy Capps & Baylee Nahlen

Criteria	Comments
Title	Earth School
Version	2.0.1
Publisher	Yateland
Audience	Kindergarten or First Grade Students
Type	This is a simulation app. Students are able to do activities that really allow them to get a great understanding of outer space.
Curriculum	Science
Environment(s):	This would be a great app for students to use and learn with at school and also at home. This is an app children could use on tablets that is fun, interesting, and also educational.
Cost	This is a simulation app. Students are able to do activities that really allow them to get a great understanding of outer space.
Describe the app	The app teaches students about planets and the solar system. They are able to move planets around and it teaches them about black holes and how planets are formed. It also has activities where you drag the planet to its shadow to help students learn distinct shapes of the planets.
Our impressions of the app	We both thought this app would be great for younger elementary students. We wouldn't go past the first grade with this app though. It is great that they are able to move the planets around and really get

	<p>the visual of seeing how the planets and the galaxy is formed. We both really liked the matching shapes to planets activity. That will help students to learn a lot about what the different planets look like. This is also a great app that we would recommend to parents to have for students at home! We all know that kids play on electronics a lot and this app is very fun and the visuals are great, but it is also helping them to learn at the same time!</p>
Does the app pass?	Yes, we think the software is great!
