

# App Evaluation Write Up

Name of App: Padlet

Evaluators: Kennedy Capps & Baylee Nahlen

Criteria	Comments
Title	Padlet
Version	73.0
Publisher	Wallwisher Inc.
Audience	Students, teachers, and other professions.
Type	We would classify this app as a tool app. We say this because it can be used to enhance a lesson, it does not teach anything. It can also be used as a way to communicate with parents. Nothing is necessarily learned while using this app.
Curriculum	This can be used in many different content areas. It would work great for reading and writing. There are blogs and storyboards templates on the app. However, the teacher could tie this into any subject.
Environment(s):	This is great for the classroom and also at home work. Teachers can see when students open up assignments. You can also share your work on padlet. As a teacher this is a great app to use to share information. There are also good templates students could use for in class projects. This could also be used for taking notes in class.
Cost	You only get three padlets for free. Then you have to upgrade to a "Pro monthly" or a "pro annual" which is \$12.99 and \$99.99 respectively.

## App Evaluation Write Up

Describe the app	You can make your own padlet or join a padlet with a code. When you make your own there are templates you can choose from or you can start with a blank one. There are a lot of helpful templates you can use. There is a blog, storyboard, charts, and so much more. Once you get started with a padlet you can type and arrange the text boxes how you want them to be. You can share your padlet with others. You can also customize it in many ways. The backgrounds change and there is a lot of options to choose from.
Our impressions of the app	We both thought that this app would be extremely helpful in the classroom. It is great that you can share your padlet for others to see. We both also really loved the blog idea. This will help a lot with students writing. There is just so many things you can do with this app that would benefit students learning. It is also great that teachers can access students work and monitor if they have opened assignments.
Does the app pass?	Yes the app passed!
