

Specdrums Mini Lesson

This lesson will be for a kindergarten class, and will cover the topic of Mathematics, specifically sorting and sequencing. The tools for this lesson will include specdrums and wevideo. Students will compose music using the specdrums, creating a sequence. They will use wevideo to record the song and share the sequence so their peers can re-create their song. This would be a good activity to use groups, and the students can share roles. This will be a great activity because students can use colors or shapes to compose their songs.
