Evaluation Write-Up

Group Member Names: Sydney Sweat, Corey Anderson, Katie Anderson

App Title: Mimo

Publisher or Producer: Mimohello GmbH

Version of App: 4.20

Target Audience: The age is 4+ but this needs to be an app for upper middle school and older students.

Type(s) of Software: Tutorial – This app allows students to learn new skills and teaches how to code.

How does it fit into the curriculum? This is a drill and practice app that works on coding skills and teaches the user new ones. It has some tutorial in it, but it's mostly practicing and going over what it is teaching you.

Cost or in-app purchases: There was a free/LITE version which I enjoyed enough. It started at the basics and worked its way up lesson by lesson. The upgraded version was $29.99 for one year or $9.99 a month. This was for more coding lessons and instructions on what to do. It doesn't allow for building projects unless you upgrade.

Description of the Software: This was made to learn how to code. This is a flexible and easy way to learn how to code that is based on you. There are levels that you work through to become more advanced and have the ability to do more. Eventually the goal is to make your own apps, games, or websites.

Impression of the Software: For a group who aren't extremely into coding and don't know much about it, this app is very user friendly. We really found this to be useful and would benefit students very much. This app is very recommended, and beats the others that are in the same category as it.

Does the software pass APPS: Yes
