

Coding with Puzzlet and CLIPS

1. Grade Level: Between 3^d grade and 5th grade
2. Coding
3. We will use Puzzlet (specifically Cork) and CLIPS (iPhone app)
4. For this lesson, students will be separated into groups of three. Two of the students at a time will go through a few of the levels until they understand how they work. When the students are familiar with Puzzlet, they will decide who is filming and which two will be explaining a tutorial. The student who films will use CLIPS to record the other two students. The other two students will create their own tutorial that “is so simple their grandmother could learn it.” Then, the students will work together to add music, filters, and fun effects to their videos.
