Carlee Collins, Erin Rezanka, and Maggie Schreit

Title: InShot (Tool, Movie-Video Creator)

Version: InShot – Only version (version 1.32.1)

Publisher: InstaShot Inc.

Target Audience: 4+. Though this app is appropriate for 4+, children would need to be significantly older to navigate the app effectively. Children would need to be old enough to where they would be able to know basic editing functions and be able to construct/edit a video. Compatible with iPhone, iPad, and iPod touch.

Curriculums: This would be great for music lessons or science lessons. Students could make and edit a video that showcases a project or evidence that they have found and gathered. This could be great for creating short play to showcase, the possibilities are endless with this app!

Possible Environments and Why: This app would work great for a school setting. Children would be able to showcase and present a video that they've made. The video could be over any subject, it could be over anything! This app could be fun to use at home, as well. Children could make fun short movies or videos with their friends and family, there is a lot you can do with this app!

Cost: Free, in-app purchases range from $.99-$2.99

Software: The app is pretty straightforward. It's a great way to edit and add effects to a video. There are several options and buttons that are helpful when editing/creating a video. The buttons are clearly labeled and it's clear to see what button does what. Navigation through the software is pretty simple. There are help buttons and options for when there is any confusion. A user simply picks out a video from the camera roll and chooses the different effects he/she would like to add to it. There are many possibilities to what this software can do and produce.

Impressions of Software & used in Class: This software is very fun to use. There are several options you can do to make your video fun and appealing. The app is simple and not confusing. This can be used as a class project so children can make their own videos for a subject. This app would be great to use in the classroom. Children would have the opportunity and ability to get creative and work together with others.

Does Software Pass: Yes
