Technology

Padlet

Padlet could be used in the classroom to have students create a presentation over something to present. Padlet could be used to organize pictures of students' projects so they are all in one place. It could also be used to share different websites that you find useful for parents/students. A teacher could use Padlet to leave work for students if she were out for a day or if there was a snow day.

Online Tools

I have discovered that there are absolutely so many online tools, the opportunities are endless. They can help enhance a lesson in so many ways by either assessment, presentations, learning, games, etc. I love online tools and how useful they are and will definitely incorporate them into my classroom.
