Title: QR Code Maker (Tool)

Version: QR Code Maker – Only version (version 2.3)

Publisher: matan randomnesski

Target Audience: 4+, though this is suitable for 4+, children must have somewhat knowledge of QR codes and children must be comfortable with using technology since URL addresses are used in this app. This app is compatible with iPhone, iPad, and iPod touch.

Curriculums: This app would be great for various curriculums. With this app, a user is able to make their own QR code to use for whatever they want. This can lead to any subject area, it's really whatever the user wants their QR code to be used for.

Possible Environments and Why: This app could be used for school purposes. A teacher could make QR codes so students would have to go around the room, or even school, to scan them to get information of some sort. This could be great to spread knowledge or promote something in school. By posting QR codes in the hallways, students would be able to go around and scan to see what the QR code leads them to. QR codes are everywhere and many companies and business use them for different purposes. It makes it easier so you don't have to print off a bunch of words and information on something, a user could simply scan the QR code to receive the information.

Cost: Free, no in-app purchases

Software: Very simple software. All you have to do is put the URL into the box and press generate, and your QR barcode is saved to your photos. This software is so simple, very basic, not confusing at all. Colors are very minimal, not too overpowering. The software is labeled very clearly, very easy to use! You just put in the URL, and that's it!

Impressions of Software & used in Class: This software is incredible. It is so simple and so easy to navigate. It makes creating QR codes so fun. This can be used in the classroom in addition to the other QR Reader app. This software allows you to make the QR barcode yourself, and with using the other app, you are able to scan it. This can be incorporated into the QR Reader lesson and can be very useful in the classroom, maybe as a scavenger hunt or something fun! The reviews state that the app is very easy to use and very helpful, which is very agreeable.

Does Software Pass:
