Mini Lesson- Integrating Technology

Add and Subtract within 20

Grade: 2nd

Class and Topic: Math- Add and Subtract within 20

Tools: Interactive Smartboard and Splash Learn Website:

<https://www.splashlearn.com/math-skills/second-grade/subtract-within-20/relate-addition-and-subtraction--2>

Synopsis: This activity is a drill and practice activity to prepare students for assessments. I will project the Splash Learn website onto the smart board and select second grade- Add within 20. For this activity student will need to be paired up in groups of two. Each group of two has a team name, which will be written on the board to keep score. The groups will be called upon to come up and answer a question on the smart board. They will play the game by following the instructions on the smart board. Students will click and drag, write in, or select the answer choice that is correct. If the students answer correctly, they get one point for their team. If the pair answers incorrectly they do not get a point and try again until they get the correct answer. At the end, the team with the most points is the winner. This activity exercises students critical thinking and team work skills while using online tools and classroom technology.
