## 1. Knovio

- <https://knovio.com>
- Knovio is an online tool that allows you to make a video that can include PowerPoint, images/files, your webcam, and your microphone. This online tool gives you many options to create and edit a video to share with others for any desired purpose. The tool has a lite version that will suffice anyone who wants to make a simple video.
- I plan on using this online tool to help students who need visuals to understand lessons. This will also help auditory learners because there is an option to record your voice. I may create a video to show students how to do something whether it be a lesson or a how to.
- Example: Emailed.

## 2. Prezi

- <https://prezi.com>
- Prezi is an online tool that allows you to create presentations that you can share with others. This tool is unique in the way that it offers many different possibilities of colors, backgrounds, and other personalization. Prezi allows the user to insert images, videos, links, and

works with many other apps you already use. The online tool has a free side which is enough.

- I would use Prezi to create a visual for students. Some students need to see things to understand them, and with Prezi it is very easy to do. I would create a Prezi for note taking and other forms of presentations because it is more enjoyable for students compared to the other free alternatives.
- Example: Emailed.

### 3. TED Ed

- <https://ed.ted.com/educator>
- TED Ed is an online tool that allows the user to design an informational presentation to spark conversation and interest in students. This online tool is free and easy to use. Teachers or students can create fun presentations to share with others about any topic they choose. The user simply comes up with an idea, designs it, and share it with others.
- I would use TED Ed in my classroom to allow the students to express themselves. This would be a good way for students to introduce themselves at the beginning of the year, make a presentation, or share

information about something or themselves. Students would enjoy using this in the classroom and the possibilities are endless.

- Example: Emailed.

#### 4. Venngage

- <https://infograph.venngage.com/onboarding>
- Venngage is an online tool that allows the user to create presentations, brochures, infographics, and many more options. The tool is free and easy to use. The user first sign up for free. Then the user chooses what they would like to create and begin creating. The options of personalization are endless and creating a Venngage is super fun.
- I would use this in the classroom to allow students to create their own Venngage when doing a project. It is simple and easy to use so students will have no problem creating and personalizing a project. I could also use this as a teaching tool to allow students to share projects with others rather than taking class time to present projects. Students could view each other's work and learn from each other.
- Example: Emailed.
