Padlet

Padlet is a virtual bulletin board where students, teachers, and parents can come together and collaborate online! I could see myself using Padlet to put fun activities that parents could show their children in their free time over important content throughout the year. None of this would be required work like homework but I think it is important to offer everyone extra recourses and some fun activities in case their child might be struggling with a certain topic and they want to learn more about it at home in their free time and also in class! The board I created for this assignment would be a great example of an extra recourse and activity board! Another way Padlet could be used is to ask a question to the class and have them answer anonymously on the board to gage if the class is grasping onto the content or if you need to go back over some things! Keeping the answers anonymous will encourage students to answer and answer truthfully even if they are not sure if they are correct.

Online Tools

There are many different types of online tools available for teachers like quiz makers, tools to make beautiful presentations and flyers, and communication tools on top of many more! Online tools can be used to enhance lessons in many ways, the online tool Visme for example could be used to create stunning flyers and presentations that can be used while teaching a lesson to help enhance that lesson and engage students. I would use some of the online tools I found to provide families with additional educational content revolving around topics we discussed in

class that they can do at home, this could range from posters to mini quizzes. I like that I can provide extra learning lessons and materials that are interactive and interesting by using some of the online tools I have found, I think by offering extra content that revolves around topics being taught in the classroom it gives struggling students extra time and chances to help them learn during their free time! Online tools can have a negative side if a teacher is using online tools to create homework, quizzes or any other assignments online and they are also due online, the main issue with this is that not everyone in your classroom has internet access so some students might not be able to use some of the extra online work or content you posted like other students might.
