

Microsoft word and Microsoft Excel are extremely similar to Google documents and Google spreadsheets. They both share many features and are not hard to navigate and learn to use, if you do get stuck you can google almost any question you might have and you can almost always find the answer you are looking for! I prefer Microsoft word and spreadsheets since I am more familiar with them and I like the way they run a bit better. Goggle is a great option if you do not have Microsoft subscriptions and do not want to pay for one since Google is completely free! Adobe Sparks is fun and easy to use as well and it is free! There is a payment option but you can do a lot of thinks on sparks for free so it's great for anyone on a budget that wants to create beautiful website pages!

I would use Microsoft products the most personally in my teaching career over Google. I like the layout of Microsoft word a lot better than Google and the same goes for spreadsheets. Microsoft Word has more templates available while Google has a semi-limited selection. Microsoft Excel also has a lot more control over graph designs and designs all around compared to Google spreadsheets. Google is a great alternative but I think I would stick to Microsoft in my career! I have never used Sparks before this class and I am very impressed with it and have enjoyed creating site pages with it! I will remember this program and use it to create flyers for my teacher sites in the future! I loved the way my fall festival flyer came out for this assignment so I will definitely be using this program in the future!
