

## Padlet

Padlet can be used for brainstorming, because of how it is laid out. It can also be used a story map for reading. Students can add different components as they read. Padlet can also be used as an interactive lesson, like we did with the project. I honestly think the children would love to do a lesson like that. Padlet can be used in a variety of ways, it can also be used a forum for students to ask questions anonymously, especially if it is something that they are not understanding. Many students suffer from anxiety, so this could be a great thing for those students. There really aren't any limitations when using Padlet, and it is also very user friendly.

## On-line Tools

I discovered that there are several sites that have tools that teachers and students can use. When I was in school, we seldomly took advantage of those tools, which is unfortunate. They can enhance the lesson by keeping the children attentive and engaged. It makes the lessons unforgettable, so when test time comes, the students can remember better. I like the fact that there is a tool for almost any project or presentation that you want to do. I don't have any dislikes, other than when there is no Wi-Fi, it is pretty much inaccessible, so if a students does not have access to a wireless network, they cannot complete assignments.
