

QR Creator  
Version 1.1  
© TapMedia Ltd

- Target Audience: This app allows children to create QR codes. It would be recommended mostly for mid-level students.
- Types of Software: This app might work best using an iPad. It can be used in pairs or even as a whole class.
- Curriculum
  - This app could be used for various reasons. Students can create a code that represents their favorite book or an interesting fact about themselves. QR codes are used everywhere in schools, therefore, using this app lets children become familiar with how QR codes work.
- Cost: This app is free.
  - Upgrade- \$2.99
- Description of software: This QR Creator allows users to create unlimited QR codes, save QR codes to Photos app, and share QR codes in other apps. With the upgrade students can change the color and style of the QR code created. Custom logos and transparent QR codes are also features that come with the upgrade.
- Impressions of software: This app is a good tool that teaches children how to create QR codes, however, it does not read the codes. Other apps similar to this one, let users create QR codes as well as scan them, in order to determine the meaning. This app would be more meaningful if it contained a QR reader. We both would recommend using a different QR creator app since this one did not have many features.
- This app passed our software evaluation.
