Math IXL

The newest version of Math IXL is 6.1.0, and the Publisher /producer for it is Quia Books. The target audience kids 4 and up. The software type for this app is discovery learning, tutorial Andrew in practice. The curriculum in math Excel is not exclusively math content but it also includes language arts variant it can be used in school classrooms to increase the richness of the curriculum anger extra practice to advanced students. The cost for this app is \$19.99 a month for unlimited access. If you have not paid the subscription you get a very limited free trial each day.

My XL is an app that can be used by students to learn math English and language arts. this app supports learning from pre-K- 12th grade. This app is very educationally based and is not very fun and appealing for children that are younger. Ask for navigation it was slightly complicated and children that are younger or easily distracted would need supervision when navigating it.

As for bells and whistles, there was a drawing section at the bottom of each of the questions so that the student could write out the question if was needed. There was also a timer in the top right corner of this app. The assignments themselves were not timed but there was a timer going constantly to show how long you have been working on this assignment. I believe this app would be of great use in more advanced grade levels. This app also makes learning competitive and not very fun unless the student is competitive.
