Elizabeth Hay

Online Tools

1. Kahoot
   https://kahoot.com/

   This is a great tool for any classroom. Kahoot is a tool that allows you to create fun learning and trivia games. It makes learning inclusive to all students. The teacher creates the game and then each student will get to answer the questions that are created. This can and will be used in my classroom to review material or even introduce new concepts. Students will have the opportunity to answer anonymously or compete. This will allow me to see one of two things, what I need to focus on or what students are not understanding. It is a great tool to assess students understanding and allow students to have fun.
   Example: https://play.kahoot.it/#/k/f2b2d146-08f4-4df5-9f8f-5b0fa3c79784

2. QR Code Generator
   https://www.the-qrcode-generator.com/

   QR codes are a great tool for any classroom. They can be used in an abundance of ways. They enhance learning and allow students to learn and have access to videos, tutorials, scavenger hunts, and may other fun and educational things that promote learning. This will be used in my classroom in two main ways. First, I will use it as a tool for students who finish work early. There will be a station set up for students who have completed work. They can go to this station and scan the QR code an have access to multiple games and activities that review what they just did. The second way is to have tutorials for concepts that students are having a hard time understanding. This way students can get another perspective of the information.
   Example: Science Games

3. Google Calendar
   https://calendar.google.com/calendar/r

   Google Calendar is a great tool for students, parents, and teachers. This app allows teachers, students, and parents to sync their calendars to the schools and teacher's. Teachers can put when assignments are due or when events are. This app also gives reminders and allows you to pick when you want it to remind you. This will be used in

my class so both parents and students know what it is going on. Students will know when assignments are due, and parents will know when events are. It is a great way for everyone to be informed and stay caught up.
