

Title: Padlet

Version: Padlets latest version is the 2018 version that is out in app stores now.

Publisher: is Wallwisher, Inc

Target Audience: the target audience for this app says 4 and up, I think that this could fit 4 and up, but would be more suitable for the older audience.

Curriculum(s): There were multiple templates and blank padlets that would allow you to center the curriculum around the app if you were familiar with the app and the material you were wanting to use.

Possible Environment(s) and why: This app could be used in the classroom, in the office or work space, it would even be a good learning tool just for teachers to have in the tool box to help enhance lessons or better explain information in a different format.

Cost: It is free to download but has in-app purchases Padlet Jetpack - \$34.99, Padlet Pro- \$12.99(monthly), Padlet Pro- \$99.99(yearly).

Impression/How you would use in classroom: this app is basically a digital canvas that you could create projects, that are supposed to be easy to share and collaborate with others on. This might be a good class app or app you could use to do projects with groups or even to do a class project together. I think planning webs, and templates would also be something you could use to help you build lesson plans for yourself.

Does software pass: I feel that this app did pass, it is a digital canvas and works like a sheet of paper and you can create basically whatever you want on it, so it can be used in any way.
