

Title: Total Recall

Version: 5.0

Publisher: Zyense

Type of Software: This software is a tool for students. This app will allow students to take information and sort it into a graphic organizer. They can break down the information they have learned to understand it more easily.

Target Audience: 4+

Curriculum(s): This app could be used to have students organize their thoughts before writing a paper. They can break down each section of the paper and color code it to make it easier to write. It could also be used to keep track of vocabulary words and definitions. This is a great tool for any assignment dealing with writing.

Possible Environment(s) and why: This could be used in a lab setting or small group. This could be a good app for students to collaborate in group projects and combine all their ideas into one. Each student could put what they feel is important. It is also something students could save and come back to. This is a great tool for students especially when it comes to writing.

Cost: The app is free, but there are in-app purchases. To unlock the mind map it is \$1.99.

What is this Software: This software is a great tool for students to organize their information. When opening the app there is a small tutorial for students and teachers to first learn the app. From there you can begin to create your mind map. You start with a blank page and from there you create what you want. There are many different options when it comes to it. You can choose different shapes and colors to help organize and keep everything straight. Different font sizes and so much more. Once again this is a great tool.

Impression/How you would use in classroom: We absolutely loved this app. This app is a great tool for students to be able to organize their thoughts about multiple different things. We really loved how you could choose the shape, pen style, color, and font size. This way it meets all students needs. The only thing we did not like is how it glitches every once and awhile. We could see ourselves using this in class when students need to write a paper. We can have students brainstorm and prewrite using this app.

Does software pass: This software does pass, because it has a lot of diversity that can meet all students needs. It also is a great educational tool for students to use when writing.
