

Mini Lesson 3

1. 2nd / Students

2. Measurement

AR.Math.Content.2.MD.A.3

- Estimate lengths using units of inches, feet, centimeters, and meters

AR.Math.Content.2.MD.A.4

- Measure to determine how much longer one object is than another, expressing the length difference in terms of a standard-length unit

3. The Answer Pad <http://www.theanswerpad.com/> : This will be used to have students answer questions interactively.

Poll Everywhere <https://www.polleverywhere.com/> : This poll will be used for a pre and post assessment of measurement.

4. This mini-lesson is all about measurement. Students will be able to measure things with the different units. Students will begin the lesson by taking a pre-assessment of measurements that I have created on poll everywhere. Students will then work on their assignments individually on the iPad. Students will then get on The Answer Pad and complete the problems that I have created for them to do. They will have to measure multiple objects in different units. This allows students to easily transition and get immediate feedback on their assignment. After students have finished, they will then take a post-assessment so I can see what they have learned and what we still need to work on. These are fun ways to integrate technology into curriculum.
