

Mini-Lesson 1

1. 2<sup>nd</sup> Grade/ Students

2. Weather and Climate

**ESS2.D: Weather and Climate**

- Scientists record patterns of the weather across different times and areas so that they can make predictions about what kind of weather might happen next.
- Climate describes a range of an area's typical weather conditions and the extent to which those conditions vary over years.

3. QR Code Generator: <https://www.the-qr-code-generator.com/> : This will bridge students into the activity we will be doing making it easier to get the activity started and learning beginning.

Kahoot: <https://kahoot.com/> : We will use this tool to allow students to have a fun educational way of reviewing the material.

4. This activity of weather and climate is a great way to introduce the fact that there are many different kinds of weather. Students will begin the lesson by learning about weather and climate. It will be about the difference, similarities, and how each impact the Earth. After the lesson students will use the QR code to access Kahoot fast and easy. By using the QR code students will be able to just scan it, type in their name, and go. After that they will be logged into Kahoot. I will have created a Kahoot that allows students to review the material we have just learned in a fun way. These two tools help students stay on task and have fun while learning. Students will be participating in this lesson individually using the iPads to answer the questions.
