Title: Code! Learn Swift

Version: 5.0

Publisher/Producer/Creator: Happy Moose Apps

Target Audience: Directly correlated to a Computer related course

Type(s) of Software: Drill and practice- This app allows you to watch instructional videos and then proceed to instruct you on how to accomplish the desired coding goal. During this app you can practice coding many different things.

Curriculum(s): Computer applications course

Cost: Free

Description: This app makes learning coding very fun and enjoyable for the most part. There are questions that practically take you step by step through the whole process of coding which makes it very easy to use. There are also video tutorials that make learning coding much easier as well. Some of the coding can be kind of difficult as you aren't exactly just handed the answers. However, this can be beneficial from whichever standpoint you view this from.

Impressions/ Use in Class: Overall, this was very easy to use. The whole app was very easy to navigate as well. There could be some more content provided to please the overall look of the app, but it definitely handles its business and gets straight to the point.
