<div align="center">Evaluation Write-Up</div>

- Title: Homer

- Version: 3.1.4

- Publisher/Producer/Creator: Homer Learning

- Target Audience: 2 to 8

- Types of Software: Drill and Practice because it enables the children to run through problems, get incorrect responses, shown how to work through their problems, and given praise for correct responses.

- Curriculum: This could be used as a tool for students to work through problems by themselves at home, or when there is spare time in the classroom. If there is a group project and they finish early, they could be instructed to pull this up and work on some problems.

- Cost: $9.99 monthly, $59.99 yearly, or $99.99 for yearly with 3 explore kits.

- Software Description: This software is designed as a building block method of teaching children different subjects. It has different windows and options for subjects and grade levels, which then leads to a variety of games to teach the student different aspects of each subject.

- Impressions: This is perhaps the better of the applications that I have thus far seen. It seems like an excellent tool to be used in the classroom or for at-home practice for learning.

- Pass Review? Yes, the applications seems very sound in use and practicality.

- Pass Evaluation? Yes, this would be a viable option in a lower level classroom, though it does not provide the proper uses for mid-level education.
