Swift Playgrounds Write-Up

- Title: Swift Playgrounds

- Version: 3.4

- Publisher/Producer/Creator: Apple Inc

- Target Audience: 4+

- Types of Software: Tutorial because it requires the user to start at a building block and progress through to more sophisticated coding techniques.

- Curriculum: This would be an excellent starter to coding just so the students could learn some of the basic and/or intricacies of coding, while having a more fun concept to learn from.

- Cost: Free to use

- Software Description: This is an app that uses a guided experience where you have to navigate some sort of animal through obstacles using coding jargon. Proper sequencing must be used to complete the level.

- Impressions: This is an excellent application that could have a multitude of uses based on the degree of difficulty that you are looking for. If the student just needs to learn the basics, then that is available. If they instead wish to learn some of the more subtle nuances then that is available as well.

- Pass Review? Yes, the application works excellently and is very user-friendly.

- Pass Evaluation? Yes, the application would be exemplary for classroom use and would be an excellent tool for teaching students coding.
