

Carlee Collins, Erin Rezanka, and Maggie Schreit

**Title:** Edmodo: Classroom Tools (Discovering Learning, Tool)

**Version:** Edmodo – Only Version (version 6.4.0)

**Publisher:** Edmodo, Inc.

**Target Audience:** 4+, this app is appropriate for younger students, but students would need to be older to be able to navigate and effectively work the app. Students would need some knowledge and practice to know how to navigate through the app. Compatible with iPhone, iPad, and iPod touch.

**Curriculum:** This app would be great for every curriculum. This app has many possibilities, so it can integrate any and every subject area. This app is great for engaging classes and it's a great way to connect students with teachers in a classroom setting.

**Possible Environments and Why:** Edmodo would work wonderfully in a classroom setting. This app is a classroom communication app that helps teachers engage with students. Teachers are able to post announcements and notes, while students are able to do the same. Essentially, it's like an online classroom, great for school!

**Cost:** Free, no in-app purchases

**Software:** Essentially similar to google classroom. You are able to create discussion boards, post announcements, anything you would do in a regular classroom. The software is very simple, but there is a lot of information and a lot of navigation needed. The software has good, clear labels, just a little confusing to navigate. Nonetheless, very helpful and a very organized way of keeping track of information while being able to engage virtually with students.

**Impressions of Software & used in Class:** Really neat software, just would be more appropriate for older grades and students who are able to navigate software a little more comfortably. Can be used in the classroom to assign work or discussion boards. This is an easy way to post and give assignments without printing off a bunch of papers. Students are able to work more virtually, which helps children become more comfortable using technology. The reviews are pretty mixed. Users like the app and how great it can be for communication purposes, but users mentioned the app crashing, a little confusing to navigate, and notifications being missed. There would be some concern using this app with the reviews.

**Does Software Pass:** Yes
