QR Code Reader

TinyLab

Version: 2.3.4

Target Audience: The app is recommended for children 4+. It would be a useful app for anyone whose device doesn't have a built-in QR code reader. Students of all ages could use this app.

Type of App: Tool

Curriculum: A QR code reader could be used in any subject or topic addressed in a classroom. The teacher or student can scan whatever code they need in order to reach the codes destination.

Cost: Free

Software Description: The app scans QR codes quickly and efficiently without any problems or hang-ups. There is also a scan history and a way to organize your codes into folders.

Impression of app: This app is useful, but most phones nowadays have cameras that are built-in QR Readers. Downloading the app would be a waste of space on your device unless it doesn't have

one built-in. The app itself does the job it was created to do, simply and efficiently.

Does it pass? Yes.
