

App Evaluations

Erika Snow-Howard and Stefanie Kennedy

Skyview

Terminal Eleven LLC

Version: 3.6

Target Audience: The app recommends users 4+. We recommend this app for students of all ages.

Type of App: Simulation with Augmented Reality

Curriculum: This app would be great for science.

Cost: There is a “lite” version that allows users to use the basic app. They can search for basic constellations and stars. It also shows Jupiter, Saturn, Mars, and the Moon. The paid version is \$1.99 and includes more stars, planets, and constellations.

Software Description: Skyview is an Augmented Reality app that allows users to see stars, constellations, and planets in real time at their current location in space. It connects the stars to show the constellations for a better visualization for the user.

Impression of app: We enjoyed this app and I (Stefanie) personally use it all the time. If I cannot place a star I'm searching for, or I notice

a new one, I immediately pull out this app. It would be a great tool for students to use during a space science lesson.

Does it pass? Yes!
