

# App Evaluations

Erika Snow-Howard and Stefanie Kennedy

Swift Playgrounds

Apple

Version: 3.1

**Target Audience:** The app is recommended to ages 4+, but we recommend it for ages 8 and older.

**Type of App:** Tutorial

**Curriculum:** Swift Playgrounds could be incorporated during center times for students to practice coding skills.

**Cost:** Free.

**Software Description:** Swift Playgrounds says that it doesn't require coding backgrounds for users to use. It allows users to see their code run in a 3D game-like world reminiscent of Minecraft.

**Impression of app:** This app was confusing and difficult to use. We didn't understand how to begin, but neither of us have any coding background.

Does it pass? No.
